IBC Project: AOMIC Emotion Matching

In this experiment, you have to tell which one of the two given faces expresses the same emotion as another one.

Following is an example of what a run might look like:

1. In each trial you will see either three SHAPES or three FACES as shown below:

2. When you are shown the **shapes**, you have to recognize which one of the two at the bottom is in the **same orientation** as the one on top.
3. Press the button under the **index finger** if it is the one on **left** and the button under the **middle finger** button if it is the one on **right**.
4. When you are shown the **faces**, you have to recognize which one of the two at the bottom expresses the **same emotion** as the one on top. Again, press the button under the **index finger** if it is the one on **left** and the button under the **middle finger** button if it is the one on **right**.
5. Remember to press the suitable button as soon as you see the images, or you will miss the trial. Do not worry if you do so, try to focus on the next one.

This task will be done twice and each run is about 5 minutes long.
