IBC Project: AOMIC Gender Stroop

In this experiment, you will be shown pictures of faces of men and women with a word like man, woman, mister or madam on top of the picture. Your task would be to recognize the sex of the face shown irrespective of the word on top.

Following is an example of what a run might look like:

1. As mentioned before, pictures of faces with words on top will be shown one after the other. For example:

…………....

2. The words may or may not correspond to the sex of the faces shown. So you have to try your best to ignore those words.

3. Press the button under your **index finger** if the face is of a **male** and the button under your **middle finger** if the face is of a **female**.

   This task will be done twice and each run is about 8 minutes long.
