Projet IBC:
Protocole Math-Langage

In this experience, you will be presented with different types of sentences, either visually on screen or auditorily.

Your task will be to **decide whether the sentences are true or false**. Press the **left button for true** and the **right button for false**. If a sentence does not make sense, **it is considered false**.

A red cross or beep will be presented before each sentence. The beep indicates that the next image will be in audio format, and the cross indicates that it will be presented on the screen.

The experiment will consist of eight series, lasting approximately 9 minutes each. Each series will be made up of 8 blocks of 8 sentences each, for a total of 64 sentences per series.
